

**The most beautiful fabric** between heaven and earth.

Awning cover collection – Made in Germany

**markilux**  
The best under the sun

A photograph of a hand holding a white architectural beam against a red-tinted background. The hand is positioned on the right side of the beam, gripping it. The background is a deep red color, with some dark, silhouetted shapes on the left side, possibly representing trees or foliage. The overall composition is clean and modern, emphasizing the contrast between the white beam and the red background.

Put only the best between you and the sun.  
Create the most alluring shade in the world.

markilux

**Printed is not woven**

Please compare the images in this fabric brochure with the original samples that can be found in the fabric collection of your local markilux specialist dealer before making your final choice. Depending on the model, awning size and pattern, the awning cover will either be seamless or with transverse or longitudinal seams in a specific symmetrical arrangement starting from the centre of the awning.

## The most beautiful fabric between heaven and earth.

### Our unique fabrics help to create a special ambience

It is the colour and quality of the awning fabric that make the ambience on your patio and in your conservatory special. Depending on their brightness and hue, colour nuances, patterns and textures succeed in creating that uniquely special effect. As a leading manufacturer of top-quality awning covers with almost 100 years of experience in the manufacture of textiles, markilux offers an unparalleled variety. Among the more than 250 patterns in coordinated colour families, you are certain to find your very own and most exquisite fabric between heaven and earth. When it comes to making your choice, allow yourself to be inspired, enthused, advised by your markilux specialist dealer ...

markilux designer awnings have received a multitude of awards:

# Reduced to the essence: Free. Time. Quality – Made in Germany.

For nearly 50 years, markilux has been developing and making top-quality sun protection solutions. markilux designer awnings are characterised by their first-rate, multi-award-winning design and innovative technology. The production of awning and cover under one roof – is the essence of what markilux “Made in Germany” represents, with the aim of making an al fresco lifestyle comfortable, convenient and enjoyable. With markilux, you can turn your favourite spot outdoors into something extra special. **Put only the best between you and the sun. Create the most alluring shade in the world.**

#### markilux quality

High-grade materials and our comprehensive quality management system ensure that each awning will have a long service life. As a company, we are certified in compliance with DIN EN ISO 9001.

#### markilux functionality

markilux combines innovative technologies and smart solutions to create high-end products. With the variety of accessories and operating methods available, you can enhance your markilux designer awning to suit your own requirements.

#### markilux design

It is the perfect combination of form and function that turns a bit of shade into a markilux designer awning. To achieve this, we rely on the long-term experience of our internal development team in cooperation with external designers.

Member of  **Rat für Formgebung**  
German Design Council

#### markilux service

The combination of a brand product, expert advice and professional installation makes your solution perfect. Qualified markilux specialist dealers provide a comprehensive service and a personal point of contact in your area.

# markilux awning covers – Made in Germany

## Functionality can be so beautiful

During the production of our awning fabrics, we leave nothing to chance. We add a final finishing flourish to the fabric with a special formula developed in house. This finish gives our awning covers incredible longevity and resistance to rain, light and fluctuations in temperature. Certified in accordance with Oeko-Tex standard 100, markilux awning covers are guaranteed free from harmful dyes and chemicals.

With an Ultraviolet Protection Factor (UPF) of 50+, all solid markilux awning covers made from sunsilk or sunvas offer the highest possible degree of UV protection for fabrics. Your skin's own protection factor is enhanced by a factor of more than 50. This allows you to enjoy sunny days for longer, without risk.

## Self-cleaning effect

Water droplets pick up dirt particles and run off the awning cover taking the dirt with them (the awning must be set at a pitch of at least 14 degrees), ensuring you can enjoy your beautiful fabric for a long time to come.

## Bonded awning covers

Panel joints bonded together ultrasonically ensure a consistent, unobtrusive appearance. The excellent resistance to water, light and fluctuations in temperature ensures that the service life of the cover is extended substantially.

## sunsilk

Brilliant vividness. Silky smooth surface. Awning covers in sunsilk impress with their unique luminosity.

## sunvas

Soft glow. Textile-like to the touch. Awning covers in sunvas score with their textile character and natural appearance.

## Light and weather resistance and resistance to fading

High-tech yarns dyed right to the core and a high-grade finish developed in house guarantee the most stunning shade in which to relax.

markilux

**markilux sunday collection**

Makes every day a Sunday. Choose your personal favourite pattern from seven different colour families – in the tried and tested qualities sunsilk and sunvas, from page 28.

**markilux specials – textiles for special requirements**

Semi-transparent, heat-reflecting, permeable, highly water resistant and flame-retardant awning covers extend the range of the overall markilux collection, from page 70.

visutext

**markilux visutext collection 50/4/me**

Inspiration drawn from fashion, architecture, colour and naturally occurring special effects. 50 innovative fabrics conjure up your own personal awning heaven in the tried and tested qualities sunsilk and sunvas – exclusively available from markilux, from page 10.

visutex

50 / 4 / *me*

“To be fully involved, to be open to new ideas, to think laterally, make technological advances, have material awareness, utilise shapes and colours fully. To tread new ground, create a vision, make a statement. These are our goals. This is what motivates us.”

Annette Busch | Head of markilux Textile Design

exclusive

# visutex | vision – innovation – inspiration

“Architecture is the continuation of Nature’s  
constructional ambitions.” Karl Friedrich Schinkel

The wider field of architecture served as a source of inspiration for the development of our visutex collection. Its shapes, textures, colours and basic principles of good design are reflected in our **exclusive** fabric patterns.

“Style is the mistress of art.” Coco Chanel

For the second theme in our visutex collection, we allowed ourselves to be inspired by the classics in fashion. At the same time, we were constantly aware that tastes in fashion can change very quickly. However, we also know that while fashion may go out of date, **style never does.**

“Colours are the smiles of Nature ...” James Henry Leigh Hunt

Colour is life. Colour is lifestyle. It is for this reason that we have set aside an inordinate amount of room for the theme of colour in our collection. Our competence in this field even enables you to choose precisely the colour that makes you feel good from an extremely broad palette and to fulfil the realisation of your own personal awning cover. **colour on demand**. My colour. My style.

“The freedom of imagination is not an escape into fantasy, it is boldness and creativeness at the same time.” Eugène Ionesco

As a pioneer in innovative awning fabric design, we have dedicated the fourth theme in our collection to special effects. Extraordinary “glowing” visual effects come into being as a result of the use of exceptional colours. This is **truly unique**.

## sunday specials

**transolair** Solar protection with a view. This sunvas fabric with special perforation technique stands for impressive transparency as well as good light and air permeability. This effectively reduces the build-up of a heat cushion between fabric and glass. | **vuscreen ALU** Solar protection with added functionality. The aluminium particles on the high-tech fibres ensure a better room climate yet the material still allows a good view outside. | **perfortex** Ideal for conservatories. Gaps in the warp, woven into the fabric, make the material permeable to both air and water. | **perla** This water-repellent sunvas fabric is an effective protection against both sun and rain. | **perla FR** This flame-resistant and water-repellent sunsilk fabric complies with strict fire retardancy regulations.

<> Shadeplus covers made from panels 120 cm wide will be made up with a horizontal seam. As a result, fabrics with a textured or flecked pattern will take on a different appearance from that of the awning cover.

## specials transolair

### **Solar protection with a view**

This sunvas fabric with special perforation technique stands for impressive transparency as well as good light and air permeability. We recommend transolair be used for the markilux shadeplus, side screens as well as vertical roller blinds and glass canopy awnings.

This perforated fabric maintains visual contact with the outdoors and shields against prying eyes at the same time.

It ensures good air circulation between the cover and the glass, effectively reducing the build-up of a heat cushion between fabric and glass. The creation of water troughs is minimised.

**Sonnenschutz with Climaplus**

This slightly transparent fabric with particles of aluminium on the fibres is particularly effective at reflecting the sun's rays. Improves the climate in the room while still offering a good view outside.

vuscreen ALU is state-of-the-art sun and glare protection for markilux vertical roller blinds.

**Ideal for conservatories**

Gaps in the warp, woven into the fabric, make the material permeable to both air and water. The risk of the formation of water troughs in rain showers and the build-up of excessive heat between cover and glass is reduced. The aluminium coating\* applied to the series 332 .. reduces solar gain as well. The weatherfast finish also inhibits the accumulation of dirt and offers excellent water repellency.

\* The top side of the material is impregnated with a higher percentage of aluminium and should face upwards/ outwards to maximise solar reflection. The aluminium in the coating is visible, especially in the case of light cover patterns and under backlit conditions.

### Good to know

For technical reasons, the panels of perfotex awning covers for the markilux 8850 are always stitched together. The covers of all other vertical roller blinds and glass canopy awnings are bonded to one another using a state-of-the-art procedure.

**This water-repellent sunvas fabric is an effective protection against both sun and rain**

The high-tech fabric with weatherproof and waterproof finish provides optimum protection against rain, and, with a UPF of 50+, the greatest possible UV protection under an awning. perla has a transparent coating. This means the coated and uncoated sides of the material are virtually indistinguishable.

## specials perla FR

This flame-resistant and water-repellent sunsilk fabric complies with strict fire retardancy regulations perla FR should be used wherever special fire safety regulations are to be observed and where protection from both rain and sun as well as a decorative effect are required.

In daylight, the radiant colours pass through the **white underside of the cover**, which makes it possible to tailor the colour design of the interior space to your specific requirements. In the evening, perla FR ensures a bright, friendly atmosphere.

**A valance is a small decorative piece of fabric suspended from the front profile**

It gives your markilux folding-arm awning a classic look (depending on the model/optional). markilux has chosen a standard braid that matches every fabric pattern. Should you, however, wish to have an alternative braid colour, please choose one from the colour options shown.

The pattern of the valance always matches that of the cover. It is cut from the same piece of material and runs out symmetrically on both sides. In the case of striped fabrics, the valance shape is matched to the stripes in the material. We cannot guarantee that the pattern repeat of a valance supplied at a later date will match that of the original cover.

Awning covers consist of technical fibres which serve a functional and above all decorative purpose. They are high-performance products that meet strict technical requirements. During every phase of production, they undergo extensive laboratory tests. Criteria such as water impermeability, stiffness, dirt and water-repellent properties, resistance to tearing and tear propagation, colour fastness and numerous other characteristics are defined, assessed and guaranteed for each fabric type by the manufacturer.

Although only first-class, quality controlled fabric is used in production, there are limits to the degree of perfection that can be achieved. Small irregularities such as knots, thicker and thinner sections of yarn, isolated yarn breakages as well as certain idiosyncracies of awning covers are phenomena that awning owners complain about occasionally, but such characteristics cannot be completely eradicated even with today's technology.

## Creases

Creases can appear during the cover manufacturing process and when the fabric has been folded. A dark line may become visible at the crease when viewed against the light, especially in the case of lighter colours. This is because the fibres have become kinked when the fabric has been folded (altered light refraction).

## Puckering of the fabric at the seams and in the panels

Puckering can appear along the side hems, around the seams and in the centre of the panel. There is a double layer of fabric at the seams. This results in different rolling diameters thus creating tension within the fabric and hence puckering.

The tension created by the folding arms and the weight of the roller and/or front profile can contribute to this effect.

Puckering can also develop if a water trough forms during heavy rainfall.

## Resistance to rain

Solar protection fabrics are impregnated with a water-repellent finish and, if properly cared for and used at a pitch of at least 14°, remain impervious to water during short, light rainfall.

During prolonged and/or heavy rainfall the awning must not be extended or should be retracted to prevent any damage.

If the cover gets wet, the awning must be extended again at the earliest opportunity once the rain has stopped to allow the fabric to dry and prevent the build-up of mildew, i.e. marking of the fabric.

## Stretching of the side hems

In most cases an active tensioning system keeps the cover almost permanently taut. Although seams and hems provide reinforcement, they also have to withstand the most strain. When the cover is rolled up, the seams and hems lie on top of each other which increases the pressure and tension even more. This results in increased strain and elongation. As a consequence the side hems may sag slightly when the awning is extended.

## Taking proper care of your awning cover

Dust and dirt can best be removed when dry by means of a soft brush. Remove leaves, twigs and similar debris immediately. Small marks or stains should be removed using lukewarm water and a standard, preferably liquid, detergent suitable for delicate fabrics (5 per cent soap solution: water temperature max. 30 degrees). Rinse thoroughly with water and treat the affected area with a commercial tent impregnation spray. Please be aware that this measure will not restore the cover to its original state.

Detailed instructions for the awning buyer with all important information regarding operation, care and maintenance are included with every awning delivery.
